

HIV ECHO

By the end of 2018, over 94,000 Texans were living with HIV. However, advances in therapy mean that people who are on HIV treatment have lifespans almost as long as people who are not living with HIV. Now, more than ever, it is critical that health care teams have the skills, tools, and resources needed to offer best-practice HIV care to patients within their medical home.

To address this, we are hosting a twice monthly **HIV ECHO** in partnership with the UT Health San Antonio South Central AIDS Education & Training Center (AETC). Sessions include brief didactics on key topics in HIV and HIV/HCV co-infection care and offer participants the opportunity to present real-life, deidentified cases and receive mentorship from a multidisciplinary team of experts in infectious disease, hepatology, pharmacy, behavioral health, and community health work.

Sessions are free and open to all members of any HIV care team

Continuing Education credits for physicians, nurses, pharmacists and psychologists are provided at no cost.

Interested in joining? Email: echoadmin@uthscsa.edu

What is ECHO?

Extension for Community Healthcare Outcomes, ECHO®, uses videoconferencing to connect health professionals to a multi-disciplinary team of experts to share knowledge and build capacity for delivering best-practice care.

Why join?

- Ongoing, case-based learning
- Engagement with a dynamic community of practice and learning
- Free continuing education credits
- Improve access to specialist care
- Capacity building for community-based clinics

Patients get the right care at the right time, from the team they know and trust.
