118th Congress, 1st Session: Funding and Policy Priorities

President William L. Henrich, MD, MACP

Support enhanced FY24 funding for academic health centers through a full appropriations package to the National Institutes of Health (NIH), the Health Resources and Services Administration (HRSA), the Department of Defense (DoD), and the Centers for Disease Control (CDC).

- Federal funding opportunities for academic medicine research and development, workforce development, and direct services through related federal agencies, along with potential funding opportunities through Congressionally Directed Spending/Community Project Funding, will continue to provide vital resources for our communities throughout San Antonio and the South Texas border region.

Passage of the National Defense Authorization Act (NDAA)

- Continued funding would support the longstanding collaborations UT Health San Antonio maintains with the region's military medical system and the Department of Veterans Affairs.
- Support continued funding from NDAA in FY24 and beyond to be applied toward research and collaboration with the Department of Defense (DoD) on Human Performance Optimization (HPO) and related pursuits.

Encourage the timely passage of an annual spending bill.

- Continuing resolutions (CRs) would create a disruptive environment for long-term initiatives in research, education, and public health.

Support any additional funding for the Advanced Research Projects Agency for Health (ARPA-H) that would supplement NIH's base budget.

Support legislation and funding for opportunities to expand brain health research and development, which will catalyze opportunities for collaboration with state programs.

- Support expansion of access to telehealth and addressing barriers to care for mental and behavioral care.
- Support funding and legislation for research into Long COVID-19 to determine and address the long-term physical and cognitive issues associated with illness.

Support legislation to increase the number of federally supported Graduate Medical Education (GME) slots to produce new physicians annually.

Updated February 1, 2023

Everything it Takes

UT Health San Antonio Facts
