UT Health Senior Care Model – Patient Centered Medical Home – A journey not a destination
Neela K. Patel, MD, MPH, Angelica Davila, MD, Ruby Mathew, ACNP, Yanping Ye, MD, Rosina Finley, MD, Chidinma Aniemeke, MD, Robert W Parker, MD, Carlos Roberto Jaen, MD, PhD
Division Of Geriatrics & Palliative Care, Department Of Family & Community Medicine
1. Jointly appointed Glenn Biggs Institute

The model contains the key elements of the patient-centered medical home: patient centeredness, comprehensive, coordinated care, and access to care with a focus on quality and safety.

How to develop the model of care?
Focus on the patient as your center
Build a common mission and vision,
Conducting multiple continuous process improvement projects,
Create a safe environment in which team members are accountable for their roles,
Obtain access to health care partners’ electronic health records
Connect, Communicate, Collaborate well with community partners (e.g., emergency departments, acute care for elder’s unit, rehabilitation facilities, long term and post acute facilities, home health agencies, durable medical equipment companies, local aging agency, and adult protective services).
